Wikidata: the basics

- A knowledge base
- Part of the Wikimedia projects
- launched October 2012
- Structured data
- Made for humans and machines

Wikidata: the basics

- Multilingual
- Collaborative
- Linked to other databases
- Released under public domain (CC0)
- Built for the chaos that is the real world.

[data access](#)

Ghent (Q1296)...

city in East Flanders, Belgium

Gent | Gand

Integrating Wikidata at the Library of Congress

May 22, 2019 by Meghan Ferriter

This is a guest post by Matt Miller, a Linked Data Applications Technical Specialist in the Network Development and MARC Standards Office in Library Services.

Wikidata is described as "a free and open knowledge base that can be read and edited by anyone, anywhere, at any time." Very similar to its wider sibling Wikipedia, Wikidata is a collaborative community that allows users to create and edit encyclopedia articles, when you contribute to Wikidata you can quickly understand Wikidata by looking at an entry. For example, if you make a claim about that person: birth date, notable works, occupation, and many other things. Combined with the hundreds of millions of other entries in Wikidata it creates a very rich knowledge base that can be used for many different purposes.

There has been a growing interest from libraries and other cultural heritage organizations to explore the potential uses for Wikidata, one emerging area of focus has been using Wikidata to link data from different sources. Many organizations maintain unique identifiers for people, subjects, works, etc. If these organizations can be linked together then you could seamlessly access data from dozens of sources if you know the Wikidata ID for that entity. For example, from above you can see the Wikidata page for Virginia Woolf has ninety links to other Wikidata entries, including links to her birthplace, her works, and the organizations. Many of these are national libraries, museums, and other cultural heritage institutions.

Quora

THE QUORA BLOG Announcing Wikidata References on Topics

Jay Wacker

Today we're excited to announce that Quora is officially using and contributing to Wikidata. Wikidata is a knowledge base run by the Wikimedia Foundation that is collaboratively edited like Wikipedia. Wikidata entities are close analogies to Quora topics both in terms of scope and meaning. The mapping of topics to Wikidata will let us improve the quality of topics by giving us more signals about what the topics are about, letting us be more sophisticated in how we use topics to personalize your Quora experience. Links to Quora topics will be available through the Wikidata entities and also from Quora topic pages to Wikidata entities.

The screenshot shows the Quora Wikidata configuration interface for the 'startup company' topic. It includes sections for 'Configure', 'Statements', and 'Identifiers'. The 'Statements' section shows a relationship to 'business enterprise' with 0 references. The 'Identifiers' section shows a Quora topic ID for 'Startups' with 0 references. The interface includes buttons for 'edit', 'add reference', and 'add'.

Spike Jonze  

Spike Jonze (pronounced "Jones" /dʒoʊnz/; born Adam Spiegel; October 22, 1969) is an American director, producer, screenwriter and actor, whose work includes music videos, commercials, film and television. He started his feature film directing career with Being John Malkovich (1999) and Adaptation (2002), both written by Charlie Kaufman, and then started movies with screenplays of his own with Where the Wild Things Are (2009) and Her (2013). Jonze is well known for his music video collaborations with Fatboy Slim, Weezer, Beastie Boys, Björk and Kanye West. [Wikipedia](#)
